Ideation Phase
Define the Problem Statements

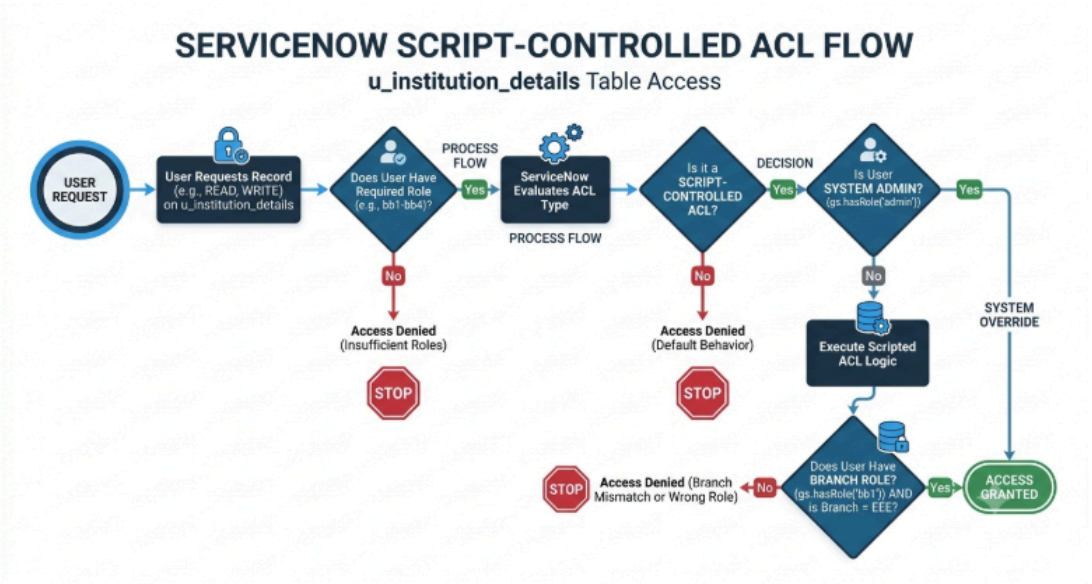

Date	03 October 2026
Team ID	SWTID-2026-5297
Project Name	Script-Controlled ACL - Restrict Record Based on Field value
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create security experiences users will rely on. A well-articulated problem statement allows our team—Balamurugan , Velvizhi , Buvanesh, Deepak and Prajin—to design the ideal script-controlled access control solution for table u_institution_details.

I am	*Describe customer with 3-4 key characteristics - who are they?*	A ServiceNow System Administrator or Departmental User managing institutional student records.
I'm trying to	*List their outcome or "job" they care about - what are they trying to achieve?*	Restrict record visibility and CRUD operations dynamically on the `u_institution_details` table based on `Branch = EEE` and assigned security roles.
but	*Describe what problems or barriers stand in the way - what bothers them most?*	Standard Out-of-the-Box role conditions grant broad record visibility across all branches without granular field-value filters.
because	*Enter the "root cause" of why the problem exists - what needs to be solved?*	Declarative ACLs lack dynamic runtime evaluation, requiring script-controlled ACL logic (using `gs.hasRole()`) to enforce record-level data isolation.
which makes me feel	*Describe the emotions from customer's point of view - how does it impact them?*	Concerned about potential data privacy breaches and compliance failures across organizational departments.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An EEE Branch User (assigned role bb1	View only institutional records belonging specifically to the EEE branch on u_institution _details	Records from other branches (ECE, CSE) are visible in the list view	Standard role permissions do not evaluate record field values (Branch = EEE) automaticall y	Exposed to unauthorized branch dat a
PS-2	A Security Administrat or	Enforce strict CRUD permissions using roles bb1–bb4 while retaining system override rights	Users perform unauthori zed Create, Write, or Delete actions on record	ACL rules are not explicitly segmented by operation type (READ, CREATE, WRITE DELETE)	Apprehensive about data integrity risks
