1. Terminology & Story Point Complexity Scale

- **Sprint:** A fixed period or duration in which a team works to complete a set of tasks.
- **Epic:** A large project deliverable broken down into smaller user stories completed over sprints.
- **Story:** A granular technical task or functional requirement.
- **Story Point:** A Fibonacci-based estimation metric representing technical effort:
    - **1 Point:** Very Easy task (e.g., role assignment, field label setup)
    - **2 Points:** Normal task (e.g., standard table setup, user story definition)
    - **3 Points:** Moderate task (e.g., server-side ACL scripting logic)
    - **5 Points:** Difficult task (e.g., complex multi-role testing, workspace dashboard implementation)

2. Product Backlog & Sprint Schedule

Sprint 1: Schema Setup & Core Security Access Controls

- **Security Schema Setup (Epic 1)**
    - **USN1:** Gathering Security & Branch Requirements (Branch = EEE) — **2 Story Points** *(Balamurugan)*
    - **USN2:** Table Creation & Schema Loading (u_institution_details) — **1 Story Point** *(Velvizhi)*
- **ACL Core Scripting (Epic 2)**
    - **USN3:** Read ACL Script Implementation (answer = current.u_branch == 'EEE' && gs.hasRole('bb1')) — **3 Story Points** *(Buvanesh)*
    - **USN4:** Create & Write ACL Guards (bb2 & bb3 role checks) — **3 Story Points** *(Deepak)*
    - **USN5:** Delete ACL Guard & Handling Inconsistency in Access (bb4 role check) — **3 Story Points** *(Prajin)*

Total Story Points in Sprint 1 = 2 + 1 + 3 + 3 + 3 = 12 Story Points

Sprint 2: Workspace Integration, Reporting & Audit Documentation

- **Security Reporting & Metrics (Epic 3)**
    - **USN6:** Bar Chart (ACL evaluation logs by operation type: Read/Write) — **2 Story Points** *(Balamurugan)*
    - **USN7:** Pie Chart (Role distribution across assigned users bb1–bb4) — **2 Story Points** *(Velvizhi)*
    - **USN8:** Line Chart (Security access denied transaction trends) — **2 Story Points** *(Buvanesh)*
    - **USN9:** Branch Exposure Mapping (Cross-branch record access audit) — **4 Story Points** *(Deepak)*
- **Workspace Configuration (Epic 4)**

    - **USN10:** Developing Security Operations Workspace Dashboard — **5 Story Points** *(Prajin)*
- **Project Documentation (Epic 5)**
    - **USN11:** Developing Solution Architecture & Security Documentation Story — **5 Story Points** *(All Team Members)*

Total Story Points in Sprint 2 = 2 + 2 + 2 + 4 + 5 + 5 = 20 Story Points

3. Velocity & Sprint Performance Metrics

Total Story Points Breakdown:

- **Sprint 1 Total:** 12 Story Points
- **Sprint 2 Total:** 20 Story Points
- **Combined Total Story Points:** $12 + 20 = 32 Story Points$

- **Number of Sprints:** 2 Sprints

Velocity Formula & Calculation:

$$Velocity = \frac{Total Story Points Completed}{Number of Sprints} = \frac{32}{2} = 16 Story Points per Sprint$$

Conclusion: Team's velocity is **16 Story Points per Sprint**.
