Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-5297
Project Name	Script-Controlled ACL - Restrict Record Based on Field value
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	**User and Role Management**	Create EEE User Create custom roles bb1, bb2, bb3 and bb4 Assign roles to users
FR-2	create control access	Create Institution Details table Add Student Roll Number, Student Name, Faculty Name, Branch, Email, Phone Number and Description fields Create records with different branch values
FR-3	read access control	Allow users with **bb1** role to read permitted EEE records Deny unauthorized users Allow administrators full access
FR-4	create access control	Allow users with **bb2** role to create Institution Details records Verify New button access
FR-5	write access control	Allow users with **bb3** role to edit permitted records Verify record modification access
FR-6	delete access control	Allow users with **bb4** role to delete permitted records Verify deletion access

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The system should provide a simple and clear interface for users to access Institution Details records according to their permissions.
NFR-2	**Security**	The system should protect records by enforcing role-based and branch-based ACL rules and prevent unauthorized access.
NFR-3	**Reliability**	The ACL system should consistently apply the defined Read, Create, Write and Delete access rules without unauthorized permission changes.
NFR-4	**Performance**	The system should evaluate user roles and ACL conditions efficiently and provide access decisions without unnecessary delay.
NFR-5	**Availability**	The Institution Details records and ACL controls should be available to authorized users whenever the ServiceNow system is operational.
NFR-6	**Scalability**	The system should support additional users, roles, records and branch values while maintaining the defined access-control rules
